Steve,

How about:

US 1216008 126/274, 99/426

See baffle "g" (figs. 1-3) which can be oriented downward or upward (e.g.- user-selectable variable construction and removably attached) - as an alternative embodiment/selection the baffle is shaped (and sized?) differently to include an "offset g2").

Two embodiment means that the user can select from among a plurality of available panels. (i.e.- "g" (figs. 1-3) or "g" with "offset g2" (fig. 5))

It may be worth your time to look in 126/274.
